Vietnam Oil & Gas Insights

CURRENTS

1. Recent Developments

The American Murphy Oil company recently announced the discovery of reserves between 170 and 430mil barrels of oil of equivalent, with estimates beyond that figure in Hai Su Vang 2X (HSV-2X), of Cuu Long basin on lot 15-2/17, off the coast of southern Vietnam of about 64km.

This comes as a major discovery since 2000 in ASEAN; the last major oil discoveries of similar scale were Malaysia's Gamasut and Indonesia's Banyu Urip.

2. How has the industry been doing?

The Oil & Gas Upstream Market Size is estimated at USD 2.82 billion in 2025, and is expected to reach USD 3.71 billion by 2030, at a CAGR of 5.64% during the entire forecast period (2025-2030).

- This comes based on a reliance on gas. Vietnam is an oil producer, yet it imports much of its crude (~80%) from abroad due to refinery limitations and declining domestic production. (365,000 barrels per day in 2005 to below 120,000 b/d in 2025)
- Petrovietnam enjoys majority control in the domestic oil industry, and foreign companies enter via joint ventures or minority control.

3. What about Gas specifically?

Vietnam's gas production is largely *associated gas* from offshore oil fields like Cuu Long, Nam Con Son, PM3. However, the majority of the fields are maturing, such as Lan Tay, Lan Do, Bach Ho, and parts of Nam Con Son, signaling an upcoming need to import.

This leads to lower output, as well as higher production costs, as new upstream gas projects (e.g. Block B of O Mon, Ca Voi Xanh) have faced issues, impacting supply replacement.

4. The need for LNG

PV GAS (Petrovietnam Gas) imported the first LNG cargo in 2023 at Thi Vai. Plans were made to increasingly make use of LNG, to offset the already declining domestic gas output, and gas-to-power plants under PDP8. Yet, Vietnam so far only buys LNG on a come-and-go basis from countries like Kuwait, and long-term contractual basis are still not the norm.

Domestic gas supply is no longer sufficient to meet medium-term demand, especially for power generation.

5. What's next: Electricity & Energy Demand Outlook

Vietnam produced 156.4 billion kWh of electricity, a 3% YoY increase.

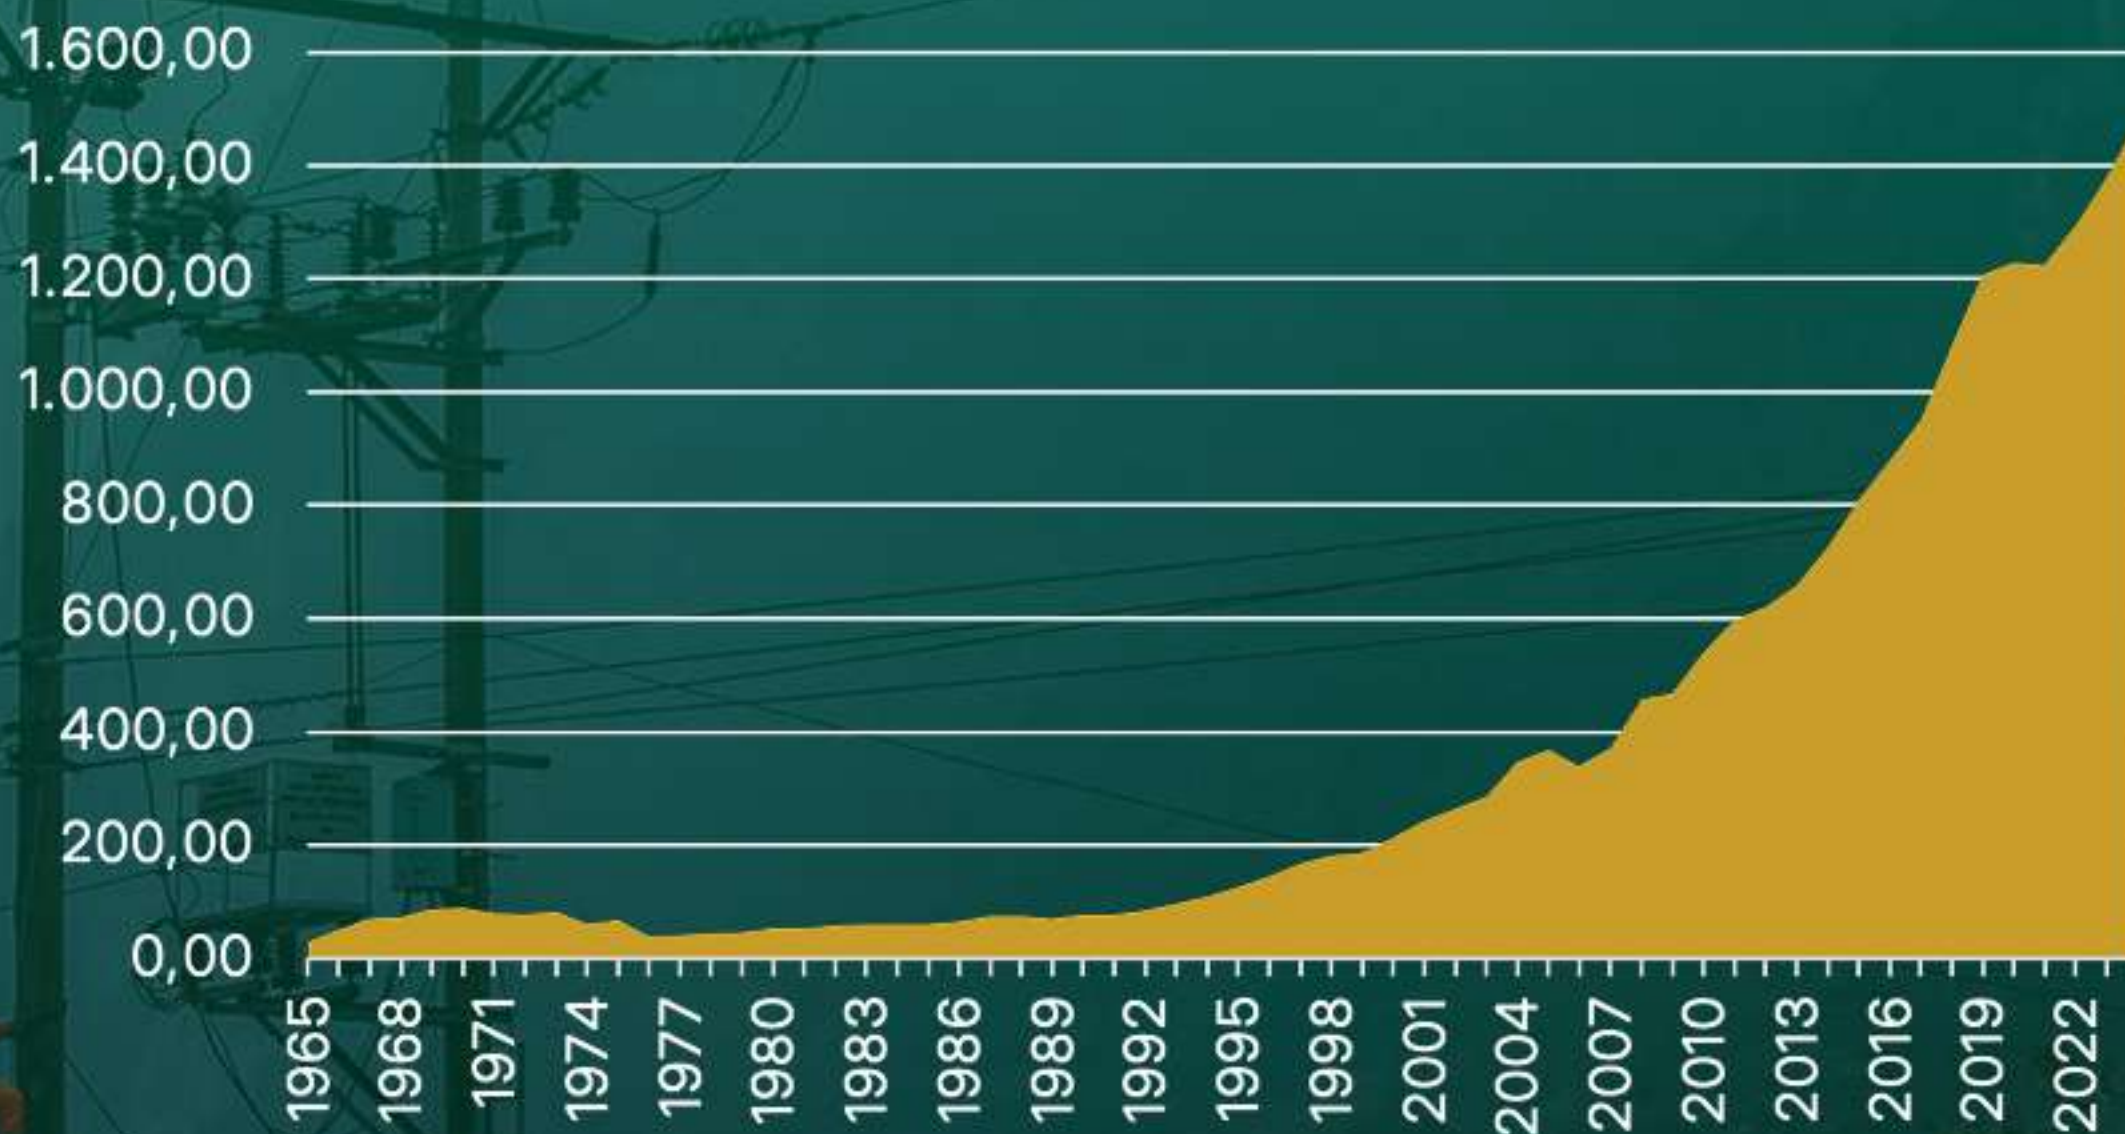

Under the PDP8 revision in April 2025, the government projects the energy sector to grow at ~10% annually 2026–2030, reflecting sustained industrial and economic expansion while Electricity Regulatory Authority (ERAV) forecasts electricity consumption growth of ~10% based on urban & industrial demand.

- Vietnam's manufacturing PMI stood at 53.0 in December. PMIs above 50 indicate expansion, suggesting that manufacturing will be a key driver of electricity demand.

Taken together, Vietnam's industrial base is expanding rapidly, and energy demand must scale accordingly.

5. What's next: Electricity & Energy Demand Outlook

Primary energy consumption (TWh)
